http://wiki.ros.org/astra_camera

This package supports ROS Kinetic and Melodic.

I Installation -noetic issues:

Unable to locate package ros-noetic-libuvc:

https://answers.ros.org/question/361536/astra-camera-on-noetic-and-ubuntufocal/

- sudo apt install libuvc -OK
 , 3. clone libuvc_ros/camera -unintalled unable to buil
 - -unintalled unable to build -can be skipped
- 2. Skipped filter settings (1.1.)

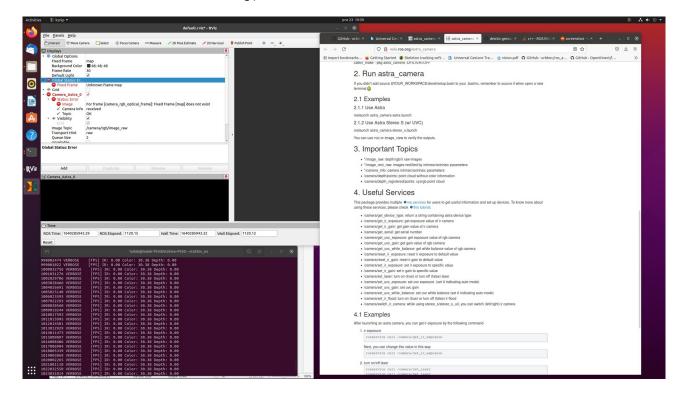

II Run astra_camera

1. roslaunch astra_camera astra.launch (or roslaunch astra_camera stereo_s.launch)

Resource not found: rgbd_launch ...

-solved by 'sudo apt install ros-noetic-rgbd-launch

Now the camera is running, but the data cannot be seen in Rviz:

Astra + RVIz:

T1: roslaunch astra_camera astra.launch

T2: rviz

rViz: select Fixed Frame

add topic published by camera

utils:

T3: rostopic list -p -display currently published topics
